

Sweet itch

Tail and mane rubbing

An extreme reaction to mosquito (culicoides) bites drives horse owners to despair, nothing is worse than a horse that excessively rubs and chafes its tail and mane. To tackle this means: prevention is better than cure and starting treatment early is better than late in the season. You can start as soon as February/ March by administering drops and supplements. But where itching is concerned, it is never too late to start either! As soon as the weather gets warmer, start applying external lotion to prevent mosquito bites and rub zinc sulfur paste onto sensitive areas.

PUUR offers the solution!

Internal use:

PUUR Detoxi 100 ml

for removal of waste products

Tip: Administer a Detoxi treatment in the Spring and in the Autumn.

Phytonics Gluco balance 500 g

for regulating sugar balance

PUUR Probiotic 150 g

for optimal intestinal flora

PUUR Culico 100 ml

desensitizing drops

PUUR Apis 100 ml

for skin reactions to mosquito bites

External applications:

PUUR SME lotion 500 ml

prevents mosquito bites, soothes and nurtures

PUUR Zinc Sulphur paste 150 g

for rapid recovery after chafing

CHOOSE QUALITY. CHOOSE PUUR®

- 1 The basic product is **PUUR Detoxi**, which encourages the removal of waste substances making the horse less sensitive to mosquito bites and a surplus of sugars from grass. When the body is cleansed, the immune system can function better and reactions are reduced.
[100 ml is enough for one treatment](#)

- 2 **Phytonics Gluco Balance 500 g**
For healthy sugar metabolism in cases of excessive sugar content in grass or feed concentrates; for overweight horses and to maintain healthy hooves and a beautiful tail and mane.

- 3 **PUUR Probiotic 150 g** for healthy intestinal flora. It improves functioning of the immune system and thus contributes to a healthy skin and coat. Supports during periods of stress.

Give a combination of **PUUR Culico** and **PUUR Apis** drops.

- 4 **PUUR Culico drops** are desensitizing plant extract drops to specifically reduce horses' reactions to mosquito bites to prevent them from rubbing. **PUUR Apis** reduces skin inflammation and swelling.
[100 ml is enough for 50 days](#)

- 5 Apply **PUUR SME lotion** externally to prevent mosquito bites; it has a soothing effect and prevents the horse from rubbing. This lotion also helps rapid healing of already chafed skin.

- 6 **PUUR Zinc Sulphur paste** is for external treatment of skin. Zinc promotes skin regeneration and sulfur contains amino acids for regeneration of skin cells.

PLEASE NOTE!

- keep away flies and mosquitos with natural products (Espree)
- put sensitive horses in the stable early and leave them inside at sunrise and sunset when biting insects are most active
- adjust feed, feed moderately, watch sugars levels in grass and give Phytonics Gluco balance for good glucose metabolism
